About End-of-Life Essentials

The End-of-Life Essentials Project offers free peer-reviewed online education modules on health care at the end of life in acute hospitals for nurses, doctors and allied health professionals. The content of the modules has been developed from the ACSQHC National End-of-life Consensus Statement. A range of implementation tools are also available to assist managers and clinicians to implement a unified approach to strategies and processes which will inform end-of-life care.

Introduction

Purpose of the End-of-Life Essentials Guide

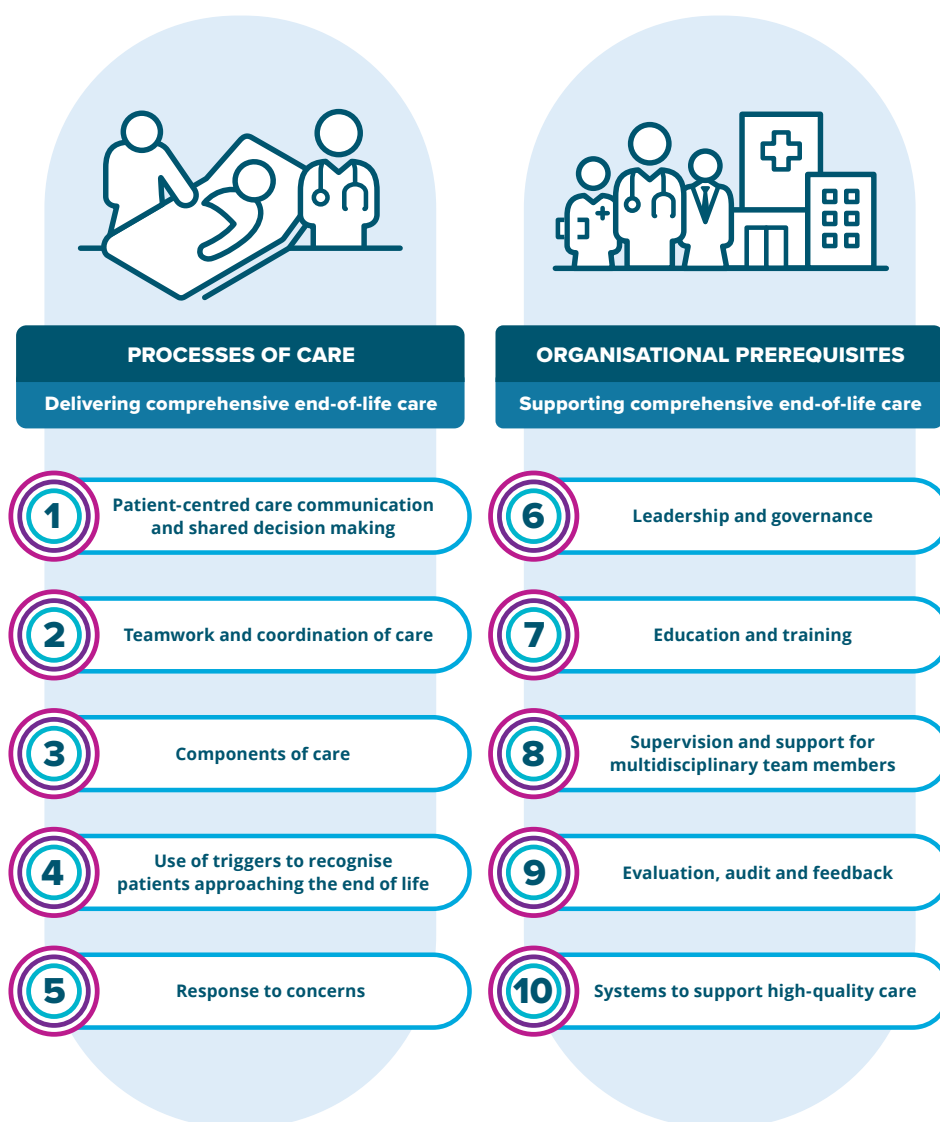

This resource for hospital accreditation expands on the mapping undertaken by the Commission of the Comprehensive Care Standard actions that focus on end-of-life care to the National Consensus Statement: Essential elements for safe and high-quality end-of-life care (Consensus Statement). The Comprehensive Care Standard is part of the NSQHS Standards (second edition) and relates to the delivery of comprehensive care for patients within a health service organisation.

The purpose of this guide is to assist hospitals executives, safety and quality managers and clinicians responsible for accreditation with implementing the six end-of-life care actions in the NSQHS Standards 2nd Edition.

Comprehensive care is the coordinated delivery of the total health care that a patient needs or wants.

The Comprehensive Care Standard includes six actions that focus on end-of-life care. These actions require health services to have systems and processes for caring for patients at the end of their lives, and for clinicians to use those systems and processes.

These six actions are linked to the 10 essential elements of the Consensus Statements outlined below.¹

Introduction

**Most people in Australia will visit an acute hospital in their last year of life.
Many of them will die in hospital.**

End-of-Life Essentials (EOLE) is a Commonwealth Funded project (from Flinders University) providing free evidence-based online education and implementation tools for doctors, nurses and allied health professionals to assist in informing and improving end-of-life care in hospitals.

End-of-life care is important for all and is now part of the National Safety and Quality Health Service Standards (NSQHS) 2nd edition.

Figure 1: Development of EOLE Education and Resources

Background

End-of-Life Essentials has worked in collaboration with the Australian Commission on Safety and Quality in Health Care (the Commission) since the project commenced in 2015.

The Commission has a role in supporting health service organisations and clinicians to improve the safety and quality of end-of-life care, and ensuring that this care meets the needs and preferences of the person who is dying.

EOLE education and resources have been developed from The Commission's resources to help support the provision of high-quality end of life care within health services (see figure 1):

- **The NSQHS Standards (2nd edition)²** which incorporates the Comprehensive Care Standard and end of life care actions.
- **The Consensus Statements**
 - The National Consensus Statement: Essential elements for safe and high quality end-of-life care³
 - The National Consensus Statement: Essential elements for safe and high quality paediatric end-of-life care⁴
- **The End-of-Life Care Audit Toolkit**
- **Delivering and supporting comprehensive end-of-life care user guide⁵**
